CENTRAL PHONEBOOK ONLINE SEARCH IN COMPANY DIRECTORY

The Central Phonebook function facilitates the search for company-user's phone numbers. A mobile user can search for phone numbers in a central directory even on the move.

Benefits of the Central Phonebook

The Central Phonebook function is available for VoWiFi, IP-DECT and DECT handsets supported by Unite Connectivity Manager or IMS.

- The Central Phonebook reduces the need for managing distributed local phonebooks
- Always updated with the latest contact information
- Reduces the capacity need at switchboard operation

Hard to remember all colleagues extension numbers in your organisation? No problem, with the central phonebook function the users are always online and connected to the central directory. The search for a person is done with a couple of clicks and are always up-to-date to match the dynamic enterprise needs.

The keypad is used to enter the beginning of the calling persons name to perform a search. A matching list with names and numbers are displayed to let the caller select and dial by name from the list.
